

GIMA

Geographical Information Management and Applications

Dear GIMA community members,

By means of this medium I'd like to thank you for the great cooperation of last half year. Personally it was quite an interesting experience to jump on a full moving MSc GIMA programme train with well-known lecturers and dedicated participants.

However, I met the last months great moments like the accreditation of GIMA till 2013, the graduations with honors of Rob and Jan, interesting thesis defences and mid-term presentations, fine evaluation of modules, many challenging thesis topics and live meetings for example at the GIS conferences.

Besides the fresh starters of this academic year who are already exploring next years options, the many 'elderly years' GIMA students are busy with their final stage of their study. Last month we, with regards to Sisi and John, set up thesis and internship trajectories which we soon will communicate to you individually. The main goal of this trajectory set up focuses on more graduations in 2009.

As you see 2009 is already beckoning and challenging us.

I do wish you all a nice Christmas holiday and a very fresh, sprightly start of the new year.

See you Soon,

Ron van Lammeren

Ps. To get you in the groove (see www.youtube.com – channel Georeport – Top 2000 Geo hits)
